SHAPE: monolithic flattened piece, distorted oval shape, dense structure with chips

SURFACE: dense rough crust, weak to medium oxidation, rounded and shallow medium depth slit-like shells, isolated subsurface cracks. Organic and inorganic layers are not present.

CONCLUSION: According to Protocol No. 23 of the meeting of the Expert Commission of the State Committee for the Protection of Natural Resources of Russia on the classification of unique amber formations as precious stones dated 27/02/2025, this amber does not belong to the category of precious stones based on a combination of classification characteristics (shape, integrity, inclusions, and color). The amber was mined at the Primorsky amber deposit in 2024.
